

DeliverUS Frontend Exam - Model F - Restaurant Commission Management

Remember that DeliverUS is described at: <https://github.com/ISSI2-IS>

Exam Statement - Frontend Owner

A **Commission Management System for Orders** has been implemented in the backend. Your task is to implement the necessary frontend interface so that restaurant owners can view and assign commissions to their restaurants.

The Business Requirement

The backend already provides:

1. **Commission Types:** There are different types of commission:
 - **Free Commission (0%):** No cost
 - **Standard Commission (10%):** Commission on orders
2. **Accumulated Commission:** For each restaurant, you can check the total sum of all commissions applied to its orders.
3. **Restrictions:**
 - An owner can only have **one restaurant** with free commission.
 - If a restaurant already has orders and does not belong to the free plan, it cannot be changed to that plan.

Commission Data

For each restaurant, the backend returns in `GET /users/myrestaurants:`

- `commission` (object): Information about the assigned commission
 - `id` (number): Commission identifier
 - `name` (string): Commission name
 - `percentage` (number): Commission percentage to apply
- `commissionId` (number): Identifier of the assigned commission

Exercises: Frontend Functional Requirements

Exercise 1: RF1. Display Assigned Commission in Restaurant List

Screen: `RestaurantsScreen.js`

Requirements:

- Display the restaurant's **assigned commission (2 points)**:

- Show the commission percentage in parentheses (e.g., (10%)).
 - If no data is available, show (N/A).
- Aesthetic consistency (0.5 point).

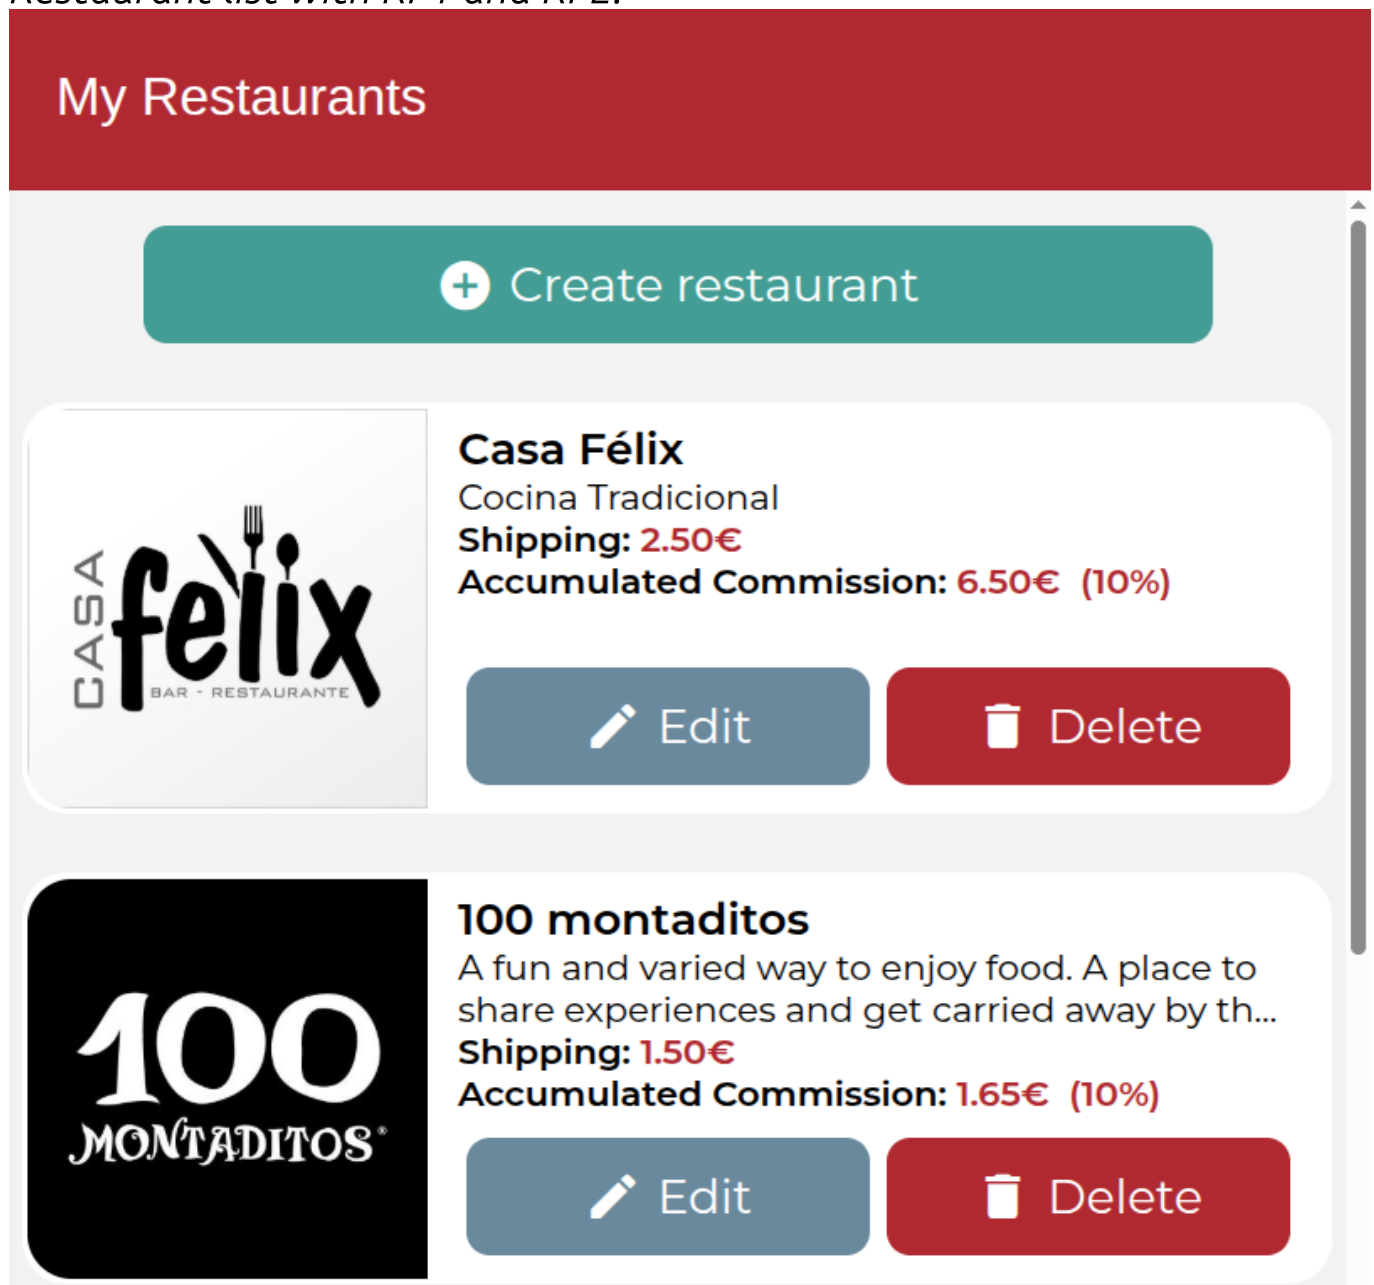

Exercise 2: RF2. Display Accumulated Commission in Restaurant List

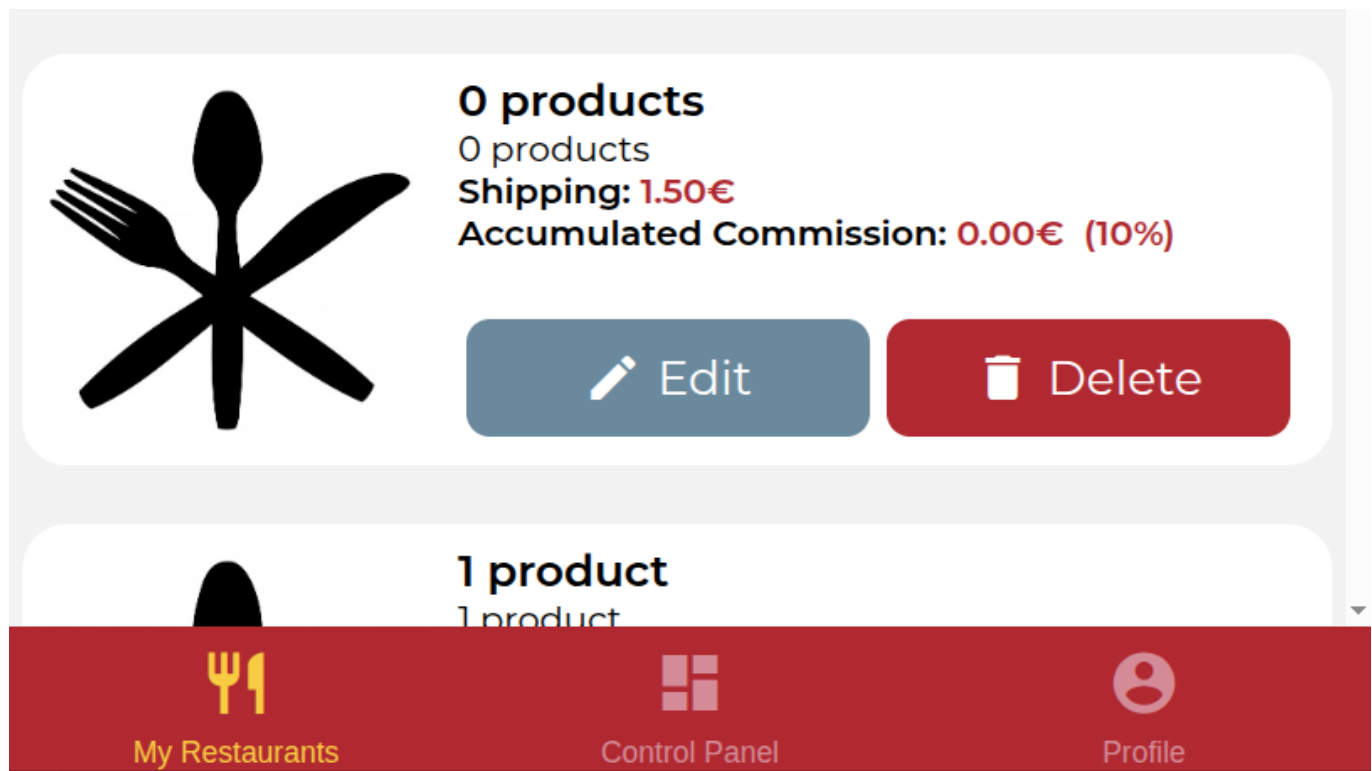

Screen: `RestaurantsScreen.js`

Requirements:

- Display the restaurant's **accumulated commission** (3 points):
 - Label: `Accumulated Commission:`
 - Show the accumulated value in currency format with 2 decimals (e.g., 125.50€).
- Aesthetic consistency (0.5 point).

Restaurant list with RF1 and RF2:

Exercise 3: RF3. Assign Commission from Edit Form

Screen: `EditRestaurantScreen.js`

Requirements:

- Add a **dropdown to select the commission (2.5 points)**:
 - Label: "Commission:"
 - Display all available commissions with format: `Name (Percentage%)`
 - Example: "Free (0%)", "Standard (10%)"
 - Commission is a **required field** in the form.
- Aesthetic consistency (1.5 points).

Edit form including the commission selector:

Description:

Cocina Tradicional

Address:

Av. Reina Mercedes 51, Sevilla

Postal code:

41012

Available API Endpoints

GET /users/myrestaurants

Returns list of authenticated owner's restaurants **including assigned commission information**.

Response:

```
[
  {
    "id": 1,
```

```
    "name": "My Restaurant",
    "description": "Restaurant description",
    "commission": {
      "id": 2,
      "name": "Standard",
      "percentage": 10
    },
    "commissionId": 2,
    // ... more fields
  }
]
```

GET /commissions

Returns list of all available commissions.

Response:

```
[
  {
    "id": 1,
    "name": "Free",
    "percentage": 0
  },
  {
    "id": 2,
    "name": "Standard",
    "percentage": 10
  }
]
```

Access: Only authenticated users with `owner` role.

GET /restaurants/:restaurantId/commission

Returns accumulated commission of a specific restaurant.

Response:

```
{
  "totalCommission": 125.50
}
```

PUT /restaurants/:restaurantId

Updates a restaurant. Already includes support for `commissionId` in the payload.

Request:

```
{
  "name": "New Name",
  "commissionId": 2,
  // ... other fields
}
```

Response (success - 200):

```
{
  "id": 1,
  "name": "New Name",
  "commissionId": 2,
  // ... more fields
}
```

Response (error - 409 Conflict):

```
{
  "code": 409,
  "message": "You cannot change to free commission. This restaurant has orders."
}
```

Environment Setup

a) Windows

```
npm run install:all:win
```

b) Linux/MacOS

```
npm run install:all:bash
```

Execution

Backend (in one terminal)

```
npm run start:backend
```

Frontend (in another terminal)

```
cd DeliverUS-Frontend-Owner  
npm start
```

Delivery Procedure

1. Delete the **node_modules** folder from frontend and backend.
2. Create a ZIP file that includes the entire project. **Important: Make sure the ZIP is not the same one you downloaded and includes your solution**
3. Notify the professor before submitting.
4. Once the professor gives you approval, you can upload the ZIP to the Virtual Learning platform. **It is very important to wait for the platform to show you a link to the ZIP before pressing the submit button.** It is recommended to download that ZIP to verify what has been uploaded. Once you have verified it, you can submit the exam.
